ThinkOn™
Where Data Thrives

Protect Your Data as a National Asset

Does your hyperscaler cloud provider properly handle data residency and jurisdiction? If your data does not comply to national and international jurisdiction laws within Canada—where it's actually gathered and stored—this can cause major control and governance issues.

A truly sovereign cloud platform must manage for your data:

Sovereignty and jurisdictional control

Access and integrity

Security and compliance

Independence and mobility

A Tailored Cloud Solution from ThinkOn

ThinkOn offers a sovereign cloud platform, powered by VMware, that's designed to meet the stringent security and regulatory requirements of your business-critical systems. Working with our sovereign cloud can help you:

- Increase security
- Maintain compliance
- Unlock data potential
- Future-proof your business
- Fuel economic innovation

Why ThinkOn's VMware-Powered Sovereign Cloud

We deliver secure, flexible, cost-effective cloud that supports digital transformation and regulatory compliance for businesses. The VMware architecture provides a consistent performance across the edge, on-premises, private cloud, and sovereign cloud.

Buy What You Need
Only pay for what you need with completely flexible cloud compute at your fingertips.

Greater Elasticity
Provision new resources in minutes and handle peaks and seasonality with ease.

More Control
Control your cloud experience with storage policies, firewall polices and more.

Managed or Self-Service
Get self-service disaster recovery, migration, backup services and more.

Portability
Consistent VMware architecture enables workload portability and mobility between clouds and datacenters.

Modernize Apps
Modernize apps further with containerization and Kubernetes services.

Choice of Storage
Robust, flexible storage options to meet different demands.

Getting Started

Contact ThinkOn today to learn more about our sovereign cloud solution.
