

ThinkOn + Nimble:

A Canadian partnership delivering high-security information management solutions to the public sector

“It’s been very easy for us to work and collaborate with ThinkOn to develop the solution that we wanted to have built. ThinkOn is just like us. Both companies are client-focused—willing and able to build a solution that will deliver the ideal business outcome for the client. We’re both committed to building and nurturing lasting relationships with customers. And, for both companies, data security is at the root of everything that we create.”

— Daryl Stott, Vice President Digital Transformations, Nimble

Jack and Jill on Parliament Hill fetched many buckets of data

Three years ago, Canadian companies ThinkOn and Nimble came together to deliver a document digitization and digital mail solution hosted in a Canadian Sovereign Cloud to one of the largest branches of the Canadian federal government.

More than a picture of a page, this mail solution consolidates all inbound communications and digitizes them. It normalizes the various formats and harvests all the data submitted in the communications in a repository with workflow capabilities that can get the communications pushed to the right people and departments. The sovereign repository has full search and data retrieval capabilities and the ability to push off the data to case management systems and other lines of business systems.

Jack be Nimble, Jack be secure

While Nimble often hosts customer cloud solutions in its own secure environment, in this case, the team wanted to partner with ThinkOn because Nimble believed our Protected-B capabilities and Sovereign Cloud offering were valuable assets for this program.

So, while Nimble provided all the services in the front end, ThinkOn hosted the application in its Canadian Sovereign Cloud.

When you’re protecting the data of the average Canadian butcher, baker, and candlestick maker, you want to ensure it’s safe. IT and security teams from Nimble and ThinkOn joined forces to successfully deliver everything required during the ITSG-33 audit process and be granted authority to operate.

Growing bigger than Jack's beanstalk—together

Because it takes more than magic beans to digitally transform, the ThinkOn-Nimble partnership has continued to grow and thrive as more public sector organizations seek secure ways to break down communication siloes, improve workflows, and empower more remote and hybrid work environments.

“We need a trusted partner in the Federal Government to provide hosting of our applications while meeting the rigorous security standards required for Protected-B information and satisfying the ITSG-33 requirements. With ThinkOn, we can check all those boxes.”

— Daryl Stott

We exceed all your data security needs

Sensitive Protected-B citizen data requires proof of a sovereign data supply chain, ITSG-33 compliance, and increased security and governance.

We keep billing straightforward and budgets in check

ThinkOn offers a flexible pay-as-you-grow model. You're invoiced for the amount quoted—with no additional costs or setup fees and no surprise ingress or egress charges.

Canadian VMware Sovereign Cloud Partner—eh?

Run your sensitive and regulated workloads on a secure, compliant Canadian cloud that meets national data residency and data sovereignty requirements.

Jack of all trades? Not us. Meet the experts of communications and cloud.

[ThinkOn](#) is a proudly Canadian-owned and operated cloud solution provider (CSP) and the only CSP capable of offering data sovereignty to the Government of Canada. Consider us your dedicated department of data-obsessed experts. We will protect your data like it's our own, making it more resilient, secure, actionable, and searchable. ThinkOn works with a trusted ecosystem of top technology partners to provide cost-effective Infrastructure-as-a-Service solutions and data management services with predictable pricing and no hidden fees.

[Nimble](#) is a business process outsourcing company that focuses on helping its customers navigate the digital transformation of organizational information. Offering a full range of information management tools, including document scanning services, scanning equipment, automated and manual data capture services, cloud information management tools, digital mailroom services, and everything in between.

Combine Nimble's ability to unlock the power and potential of information with ThinkOn's ability to keep the data supply chain sovereign and secure, and you get something amazing that makes public sector departments at all levels very happy ever after.

Let's do this—together.
