DRaaS with Veeam
Disaster Recovery with Veeam is the ace in your hand

ThinkOn

Don't fold in the face of ransomware

Fewer than 10% of companies survive a disaster without a disaster recovery plan[1]

In the Americas, 47% of data center servers, 49% of remote offices and 46% of cloud instances were impacted by ransomware[2]

24% of organizations that faced a ransomware attack paid the ransom, but were unable to recover their data[3]

Ransomware attacks cause an average of 16.2 days of downtime[4]

The average cost of downtime is $88,000 per hour—or $1,467 per minute[5]

It's high stakes when business continuity is on the line. When disaster strikes, ThinkOn Disaster Recovery (DRaaS) with Veeam is a recovery plan that's a sure bet.

Don't gamble with your business

Downtime costs hurt more than just your financials. Downtime damages your brand reputation, employee productivity and satisfaction, and customer trust.

Your business relies on digital technologies. With all that data moving around, a disaster recovery strategy is critical. This is especially true during times of economic uncertainty—when every happy customer counts, and every bad actor in a rapidly evolving cyber threat landscape is trying a different tactic.

A reliable disaster recovery solution helps organizations avoid catastrophic data loss. With a comprehensive data backup and recovery strategy in place, you can be certain that your data is not only protected from an outage or cyber threat, but also safe inside a secure data supply chain.

### Part of a winning disaster recovery strategy

ThinkOn's Disaster Recovery with Veeam is a DRaaS solution that makes it easy to replicate all your IT workloads and apps from private or public clouds, for both virtual and physical environments.

Recovery is a sure bet when you use our next-generation instant recovery engine underpinned by software from Veeam, a leader in data center backup and recovery solutions.

ThinkOn DRaaS with Veeam won't let you down when data disaster strikes (because a data crisis is not the time to discover that parts of your machines aren't replicating properly).

It only takes a minute—or ten—to get in the game

In just ten minutes, set up cloud replication with accelerated DR and one-click failover orchestration for instant mass (or specific VM) restore mechanisms.

Prices that won't cost you all your chips

With hyperscale cloud, replicating in is painless, but getting your data out during recovery? That'll cost you. With ThinkOn, enjoy foolish-free billing and no invisible fees—ingress, egress, or otherwise.

You hold the cards

As the subscriber, you retain control over replication policies so you can build the right solution for your applications. You can also get geo-specific about where your data resides.

A full house of disaster recovery experts

ThinkOn is a Veeam accredited cloud provider and platinum partner with a slew of Veeam-certified experts on staff. Our service levels and infrastructure follow Veeam's best practices.

No bluffing

DRaaS with Veeam eliminates the need to build, maintain, and grow a second site on your own.

Our deal? Keeping disaster recovery simple. DRaaS with Veeam diminishes the effect of probable disruptions, allowing you to:

- Safeguard all your virtual systems with the help of a single, reliable partner
- Employ partial failover at a low cost for most VM workloads
- Comply with SSAE 16, ISO 9001/27001, HIPAA, and PIPEDA
- Mitigate risk and prevent expensive downtime
- Conduct efficient and non-disruptive DR testing

With us, the stakes are in your favor

If you run into a problem, we have Veeam experts on staff with deep industry experience. You'll get faster support dealing with us than dealing with the software vendor.

Time to go all-in with ThinkOn DRaaS with Veeam.
