

Amber DataVault

Offline, air-gapped storage for secure, compliant, and cost-effective long-term retention—ideal for enabling new AI use cases and maintaining a competitive advantage.

Challenge

Organisations are generating more data than ever—but storing it securely, affordably, and compliantly over the long term remains a major hurdle. Traditional cloud storage can expose sensitive information to cyber threats, create unpredictable costs, and fall short of regulatory requirements. For most organisations, losing historical data means losing future opportunities.

Amber DataVault is the essential solution for keeping your critical data safe, accessible and compliant.

We provide ultra-secure, cost-effective long-term storage for infrequently accessed “cold” data, with built-in compliance, air-gapped protection and S3 compatibility—designed to protect records, simplify audits and reduce operational risk. Use Amber DataVault on its own or as part of your archiving environment to effortlessly safeguard information while your team focuses on core business priorities. Let’s set up a call to see how Amber DataVault can make data archiving easier for you.

By the numbers

68%

of Australian/New Zealand organizations recover data from public cloud storage at least weekly (for backup)

64%

of ANZ organizations access or retrieve archived cloud data on a weekly basis

17%

of ANZ businesses experience operational issues due to slow access to cold cloud storage

Statistics reference: chiefit.me

Results you can rely on

Secure your data offline with cyberattack protection and easy, flexible payment options. Simplify compliance, ensure long-term access, and control who retrieves your critical information—effortlessly and confidently.

- Enjoy peace of mind knowing your data is securely offline and protected from cyberattacks.
- Keep your IT budget under control with transparent, flexible payment options.
- Reduce regulatory risks and simplify audits with secure, compliant data storage.
- Trust that your critical data is safe and accessible long-term without costly migrations.
- Work efficiently with flexible data access and compatibility testing before committing.
- Feel confident that only authorised personnel can access your sensitive archived data.

“ThinkOn’s high level of security and reliability, the ease of doing business with them, the monthly billing, and the unlimited data combine to create a phenomenal product.”

—Tony Smith, Commercial Director, Primenet

Features and capabilities

Amber DataVault is a specialised, secure offline storage service optimised for long-term AI driven data archival needs to meet internal or regulatory compliance requirements.

Amber DataVault with four-factor authentication and daily tape vaulting is a unique data protection feature that requires the multi-factor validated approval of two or more compliance personnel prior to the release of data from Amber. Amber DataVault also aligns seamlessly with the NIST definition of an air-gapped data storage solution. Plus, with an unlimited number of retrievals per month, what you see on your contract is what you get— with no surprises when you need to retrieve your data.

Enhanced model performance

Designed for massive-scale AI datasets with petabyte-level scalability and ultra-low-cost tape integration. Larger, more diverse datasets lead to better-trained AI models with improved accuracy and reduced bias. Historical data provides crucial context that newer information alone cannot deliver.

Future-ready AI development

Retain comprehensive datasets now to unlock advanced AI capabilities as your organisation grows and technology evolves.

Cost-optimised infrastructure

Purpose-built for AI workloads, our storage architecture minimises long-term costs while maintaining data integrity and accessibility. As an end user, you don't need to worry about scaling your workload or allocating additional capacity.

Competitive intelligence

Companies with extensive, well-organised historical datasets consistently outperform competitors in AI initiatives. Your data archive becomes a strategic asset that's impossible for competitors to replicate quickly.

Immutable storage

Immutable, long-term retention with tapegrade durability and ransomware protection. Once your data is written, it cannot be altered or deleted, providing maximum security and compliance

Seamless S3 integration

Seamless S3 integration works with your existing tools, no retooling needed. Enjoy cloud-native compatibility with the flexibility to scale storage without complexity.

Why choose ThinkOn?

- We're 100% channel-only, so we never compete with partners or sell direct—we win when you win.
- Our building block approach integrates modular tech stacks to help you scale, innovate faster, and stay competitive.
- ThinkOn is not subject to any foreign data access or privacy regulations outside of Canada.
- ThinkOn is a VMware Cloud Service Provider (VCSP). We are a VMware Sovereign Cloud Provider built on the VMware platform and the first Canadian partner in the VMware Sovereign Cloud Initiative.
- Predictable, subscription-based pricing means no hidden fees or billing surprises.
- Our 24/7/365 support is always human—no bots, no menus, just real help when you need it.
